

THE DROPHEAD COUPÉ DE VILLE

by E. D. Abbott Ltd.

MOUNTED ON THE JENSEN MODEL 541 CHASSIS

Designed and constructed on sleek, wind-cheating lines. Excellent visibility is afforded through the straight laminated glass windscreen which is positioned as near to the driver as possible to avoid interior fitting reflections. Opening type ventilator windows are fitted to the front of the doors and both the door and quarter windows lower completely. A large window is fitted in the rear of the hood.

The luggage locker, which is spacious and of useful shape, is fitted with a large lid. The spare wheel is carried in a practical method below the luggage locker and is easily accessible by lowering to the ground.

The three-position hood, which is simple in the extreme to operate, offers the best possible method of taking advantage of any climate.

Separate front bucket seats are fitted which are attractive in appearance yet offer the firm support desired in a car of this nature. The rear seat accommodates two persons and is upholstered in style to match.

Instruments are clearly mounted in a walnut facia board which also contains a useful size glove box. Walnut is also fitted to the door tops and windscreen surround.

The materials used on this body, which is mounted integrally with the chassis, include ash and steel framing, aluminium and plastic panelling, finest pile carpet and best quality leather.
